BIO TALK - HiDenMAPS: a biophysical tool to understand the interactions of single molecules with their environment

NICOLAS MATEOS

June 07, 2022
12:30 to 13:30
BLR (351-P3)

BioTalks series is designed to share new & ongoing research results among Bio-physics research groups at ICFO, acquire knowledge on tools and cutting-edge techniques and create a space to bring together researchers from different groups.
The second lecture of this exciting new series **i¿½HiDenMAPS: a biophysical tool o understand the interactions of single molecules with their environmenti¿½** will be given by **Nicolas Mateos** from Single Molecule Biophotonics research group, led by Prof. Dr. Mari Garcia-Parajo

The lecture will be held in the **BLR (351-P3)** on **June 7 from 12:30-13:30**
The lectures will be held every other Tuesday from April to June.

After the lecture a networking session with pizza will take place at the picnic area, outside ICFO - An opportunity to meet and talk with colleagues in an informal setting.
Participation is open to all ICFOnians
Participants interested in also attending the networking session should register here
