ICFO

PLUS+ TRAINING AND DEVELOPMENT PROGRAM: Four Assorted Quantum Pieces

DR. KAROL ?YCZKOWSKI

May 11, 2021
10:00 to 12:00
Online (Zoom)

Talk 4. Quantum designs and Absolutely Maximally Entangled (AME) states.

An AME state of a system consisting of 2k parties is distinguished by the fact that for an splitting of the system into two parts with k subsystem each, both parties are maximall entangled. Such states, useful to construct quantum error-correction codes an teleportation schemes, are known for several systems including four systems wit N=3,4,5,7,8... levels each and a six-qubit system. We show that the AME(4,6) state of fou subsystems with six levels each exists and present an analytical solution, equivalent to 2-unitary matrix of order 36 and a perfect tensor with 4 indices running from one to six [4] Furthermore, it yields a quantum error correcting ((3,6,2))6 code and can be considered as quantum solution of the famous 36-officers problem of Euler with entangled officers. W

tend to believe this result will trigger further research in the field of quantum designs an quantum combinatorics
