

THEORY LECTURE: Quantum Key Distribution (Part 4)

ANTONIO ACIN ICFO

October 28, 2021

10:00 to 12:00

BLR & Online (Zoom)

The lectures start by explaining the standard protocols for quantum key distribution, and then discuss their security proofs and implementations. After presenting some of the hacking attacks on these protocols, we introduce the device-independent formalism and explain why they provide a stronger form of quantum security.

Attendance is mandatory
