

YOUNG PHOTONICS CONGRESS

March 13, 2026

09:00 to 13:15

ICFO Auditorium

Come to the next **Young Photonics Congress** and live the experience of a scientific congress where the spotlight is on young people like you

If you're a high school student (grade 9-12) and you are developing some project related to photonics or the topics we research at ICFO, you could **explain your work** to other **students** and to **ICFO researchers**. It is a fantastic occasion to share knowledge and experiences with other people who share the passion for science.

In addition, by participating with a project you are eligible to win the **YPC Prize**, a two-week stay in an ICFO research group in July!

PROGRAM

10:00 - 10:15: Opening remarks and introduction to photonics and ICFO

10:15 - 11:20: Flash talks by ICFO researchers about their research topic

11:20 - 11:30: Group photo

11:30 - 13:00: Project presentation

As in a typical poster session of a scientific congress, all authors will be presenting at the same time, while the audience is free to browse through the different projects and to ask questions to the authors in small conversation groups.

13:00 - 13:15: Closing remarks
