

CELLEX-ICFO-MPQ Postdoctoral Research Fellows

Top-class researchers encouraged to apply for Postdoctoral fellowships for ambitious ICFO-MPQ collaborative projects

February 21, 2019

In February 2015, the CELLEX Foundation generously agreed to finance a new fellowship program between ICFO and the Max-Planck-Institute for Quantum Optics (MPQ) in Munich, establishing a strategic research collaboration on topics of common interests.

ICFO is currently receiving applications for the fifth edition of the program, encouraging talented postdoctoral researchers, regardless of citizenship, to apply to take part in ambitious collaborative projects at the forefront of science and technology. The Fellows will be associated to both an existing ICFO and a MPQ research group, reporting to the corresponding Group Leaders who will be responsible for the Fellows' research activities and the coordination of Fellows' tasks at ICFO and the MPQ.
