EMBO Young Investigator Program

Prof. Melike Lakadamyali recipient of the prestigious EMBO Young Investigator Program Grant.

November 06, 2013

The European Molecular Biology Organization (EMBO) is an organization of more than 1500 leading researchers that promotes excellence in the life sciences. The major goals of the organization are to support talented researchers at all stages of their careers, stimulate the exchange of scientific information, and help build a European research environment where scientists can achieve their best work.

Each year, EMBO selects around 20 of the best young group leaders in Europe through a highly competitive selection process to join the EMBO Young Investigator Program (EMBO-YIP). This year, Nest Fellow Prof. Melike Lakadamyali, leader of the *Advanced fluorescence imaging and biophysics* group at ICFO is among the young investigators who have been selected. During their three-year tenure in the program, EMBO Young Investigators receive a range of financial and practical benefits. These support them during a

critical stage of their career, and help them realize their potential as world-class researchers.

Congratulations Melike!
