
ICFO on Channel 33

Children explain in TV program InfoK what they have learned about light as a frontier tool from ICFO scientists at the Fascination of Light exhibition.

December 12, 2008

InfoK, the news program for children, devoted a short news feature to the *Fascination of Light* exhibition being held at ICFO until December 3rd. The feature, broadcast by the television station Channel 33, portrayed the unique experience of children getting a first hand view of the exciting properties of light with the help of ICFO researchers. The interviews convey that one of the central messages of research at ICFO -light as a frontier tool- was clearly captured by the young visitors.
